Linkedin Profile

GitHub Profile

My Portfolio (for academic and professional projects)

TECH STACK

- Programming Languages:

  Python | C | C++ | PHP | HTML| CSS | Java | JavaScript | SQL

- Frameworks and Tools:

  GitHub | CLion | Figma Visual Studio Code | GitLab | QGIS

LANGUAGES

- Portuguese (Native)
- English (Fluent)
- Spanish (Intermediate)

OTHER INTERESTS

- Immersive Experiences
- Computer Vision
- Generative AI
- Cyber security
- Creative Coding
- Robotics and Automation

PROFILE

Computer Engineering student at FEUP with a strong interest in software systems, artificial intelligence, robotics and automation. I actively seek hands-on opportunities where software interacts with real systems and hardware. I am particularly interested in developing skills in edge AI, embedded systems and efficient AI deployment.

EXPERIENCE

Full-Stack Developer - *Droplawi* 03/2025 - Present

Droplawi is a wholesale company of vintage second-hand clothing.

- A self-initiated role in which I proposed, designed, and developed the company's official website from concept to deployment. My work involved creating the visual identity, defining the site's design, structure and implementing both backend and frontend using **JavaScript**, **CSS** and **HTML**.
- Currently using **React** in parts of the page to explore component-based architecture and to improve frontend skills.

Generative AI Summer Camp - *INESC TEC* 06/2025 - 09/2025

Institute for Systems and Computer Engineering, Technology and Science

- Explored generative AI models for image and video creation (**DeepFloyd, Kandinsky, Stable Diffusion, Versatile Diffusion, DALL·E 2/3, PixelSpace, Latent Diffusion, Giide, CLIP, BLIP**) using **Python**.
- Learned to craft prompts to generate content aligned with user intent, gaining practical skills in AI-assisted creativity.
- Concluded that generative AI can dramatically speed up creative workflows and expand possibilities for digital content, reinforcing my interest in AI and creative technologies.

Software & AI Engineering Intern - Space Team - *CEiiA* 10/2026 - 02/2027

Engineering and Product Development Centre

- Working with satellite images for **object detection**, identification and classification, including aircraft, ships and buildings.
- Supporting the preparation and evaluation of **datasets** and **benchmarks** involving polygon-based area identification and vegetation analysis.
- Exploring methods to detect, analyze and compare environmental characteristics across different geographical areas using satellite images.
- Contributing to data-driven approaches for geospatial analysis and conversational interaction with satellite image data.

Selected Participant – Erasmus+ Blended Intensive Programme (BIP) 10/2026 - 02/2027
XR Class – Extended Reality - FEUP & UiT

- Developing interactive **XR applications** using **Unity** and **C#** through two practical projects.
- Implementing **3D** interactions, **immersive** environments and interactive functionalities.
- Collaborating in international teams on project development and demonstrations.
- 5 ECTS upon successful completion.

EDUCATION

Bachelor's Degree in Informatics and Computing Engineering – 3rd Year Student 2023/2024 - Present
Engineering College | **FEUP at U.Porto**

First Certificate in English Cambridge 2022/2023
University Press & Assessment English

Highschool 2022/2023
Science & Socioeconomic branch | Colégio das Terras de Santa Maria
